Scenario Builder

CBP Partnership Watershed Model

Anthropogenic factors:

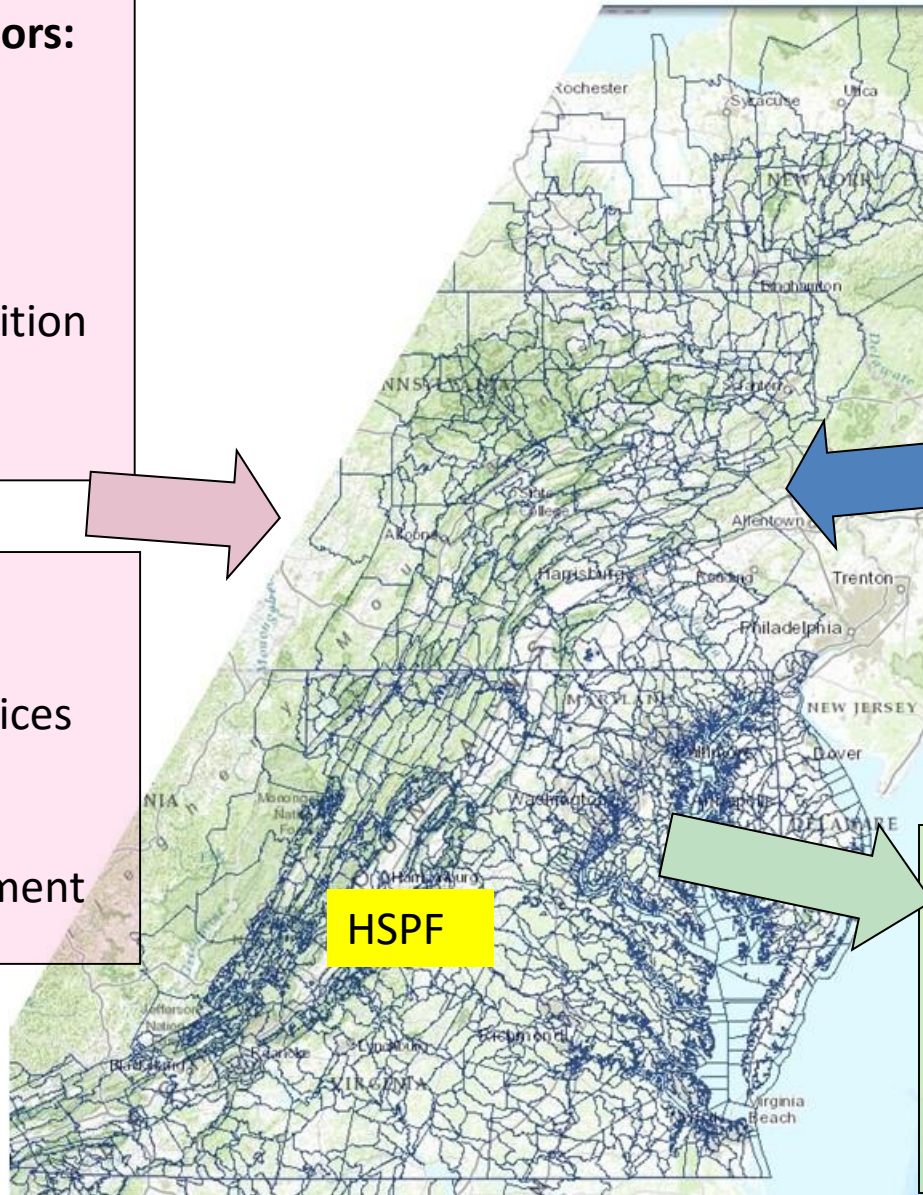

- Land Use Acreage
- Fertilizer
- Manure
- Crop types
- Atmospheric deposition
- Waste water
- Septic

Management:

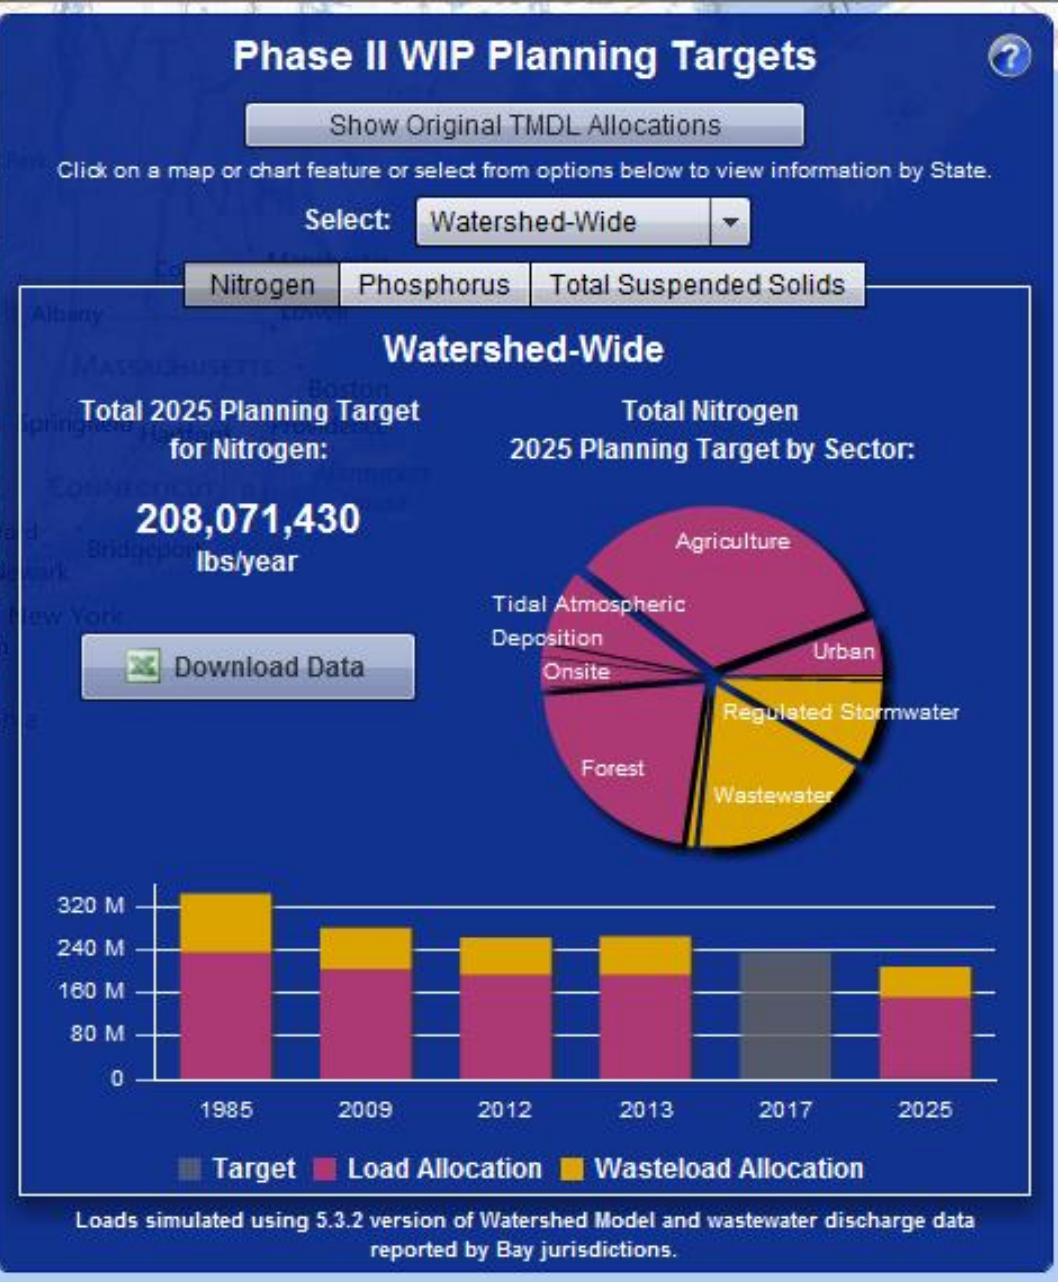

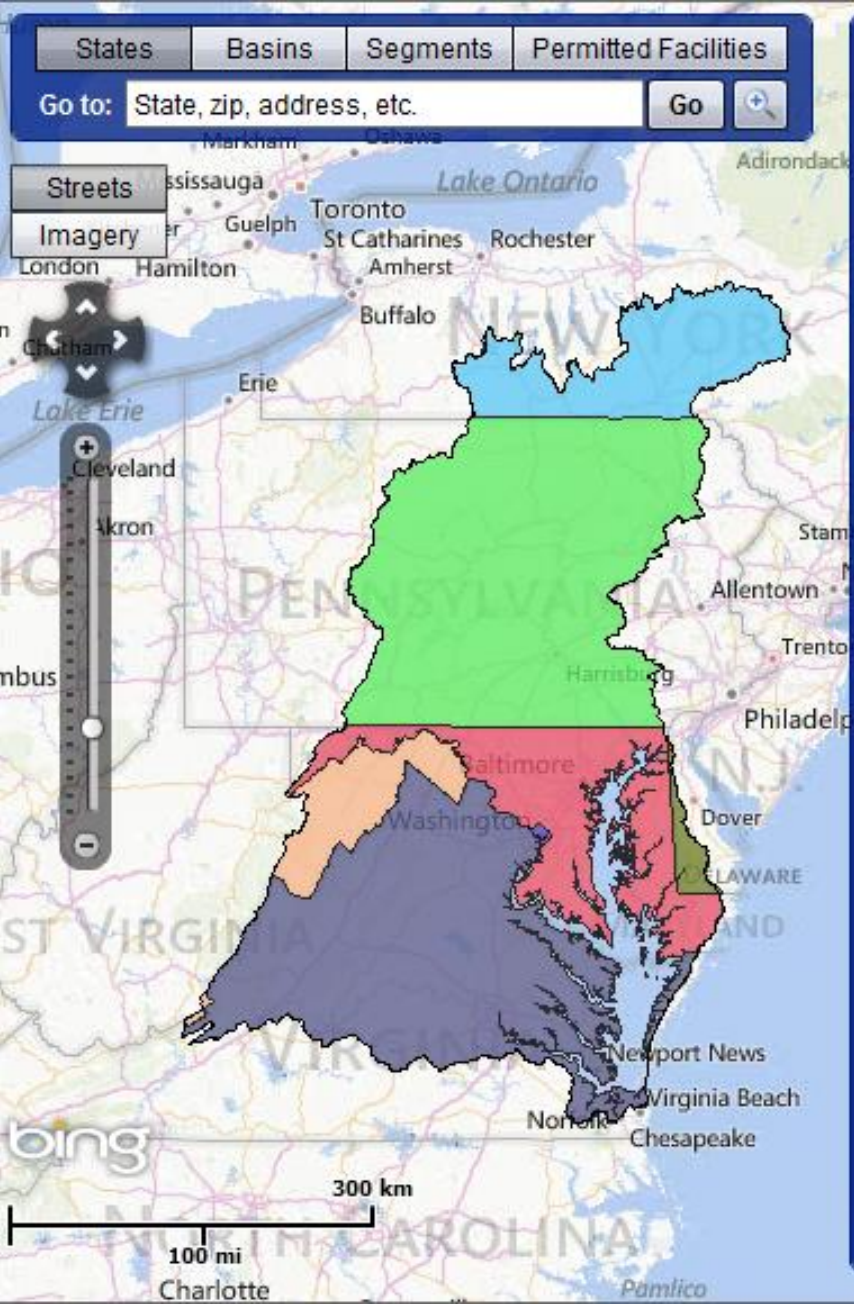

- Land Use Changes
- Conservation Practices
- Urban BMPs
- Emission changes
- Waste water treatment

Hourly or daily values of Meteorological factors:

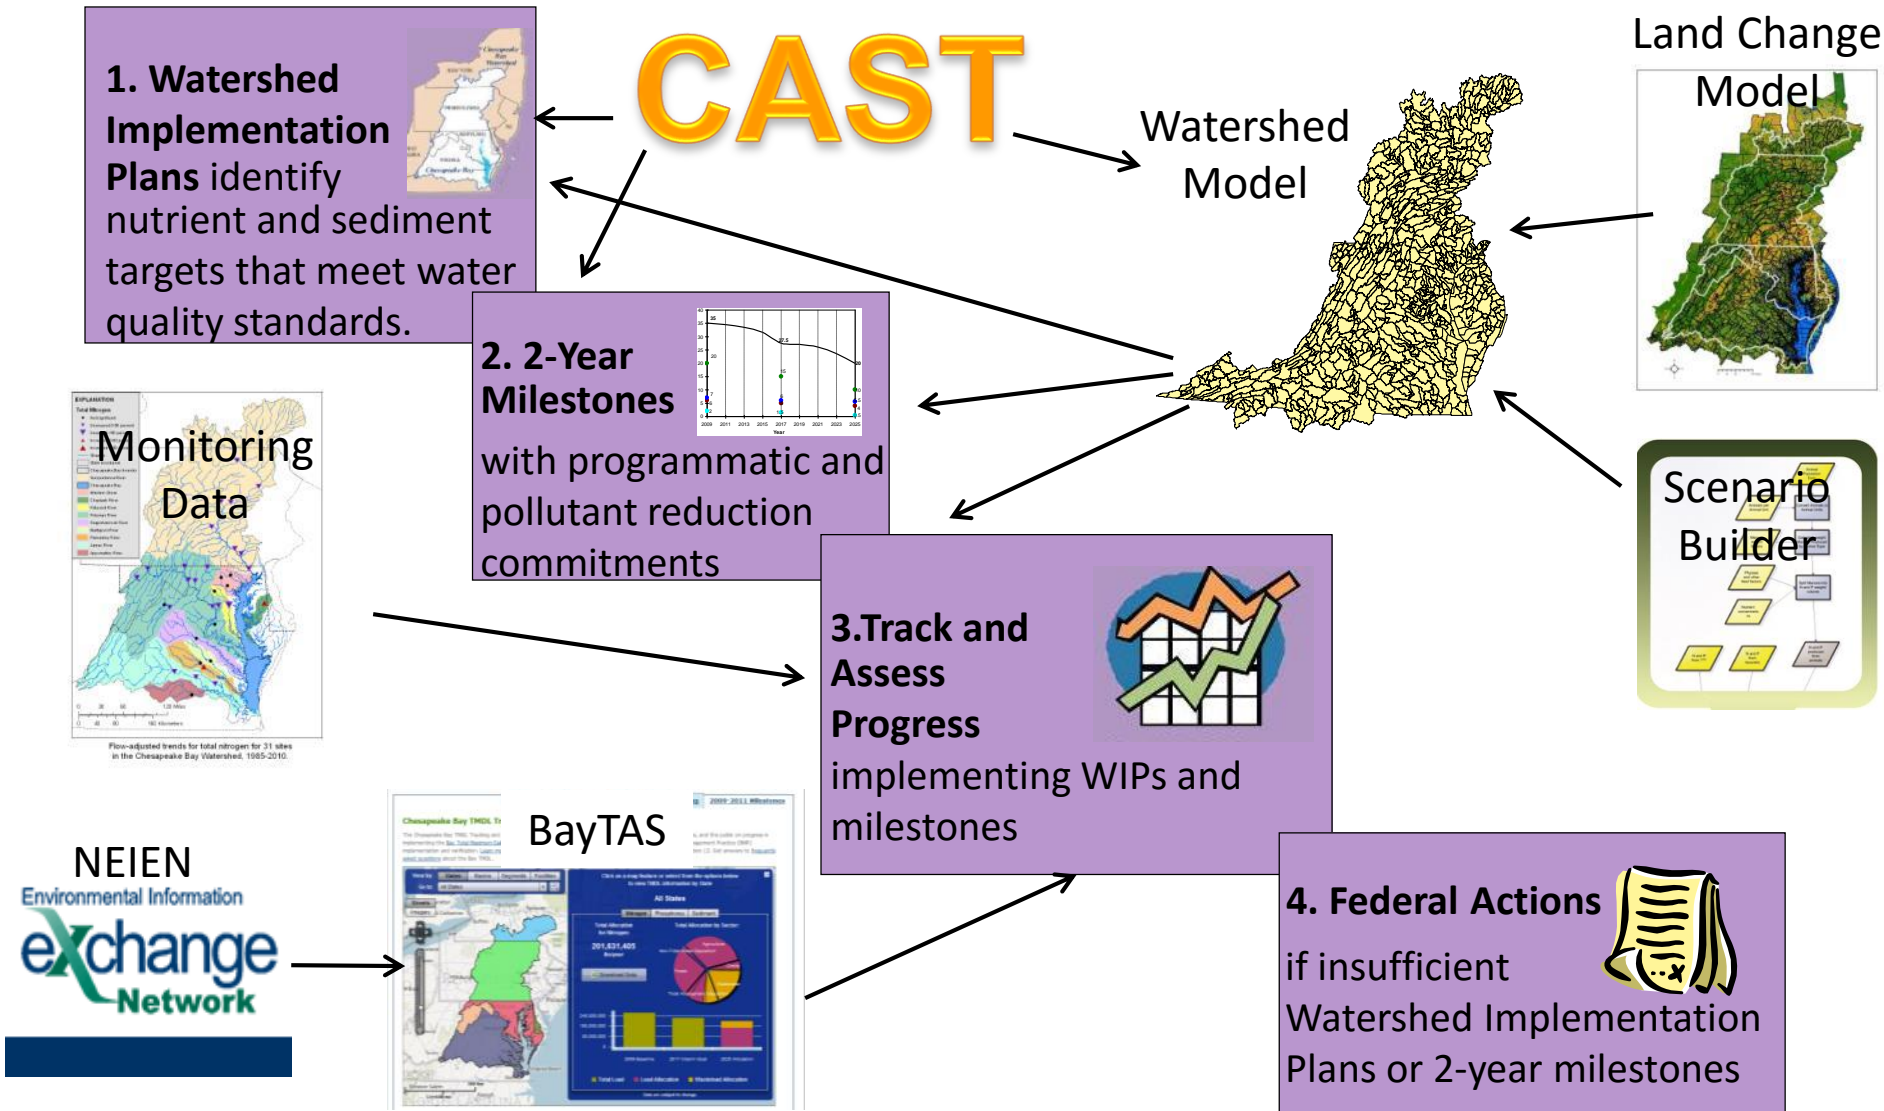

- Precipitation
- Temperature
- Evapotranspiration
- Wind
- Solar Radiation
- Dew point
- Cloud Cover

The Models

Expect changes

USE
The Models

Model related Membership as of 7/2013 – 365 individuals

Chesapeake Bay Program Partnership

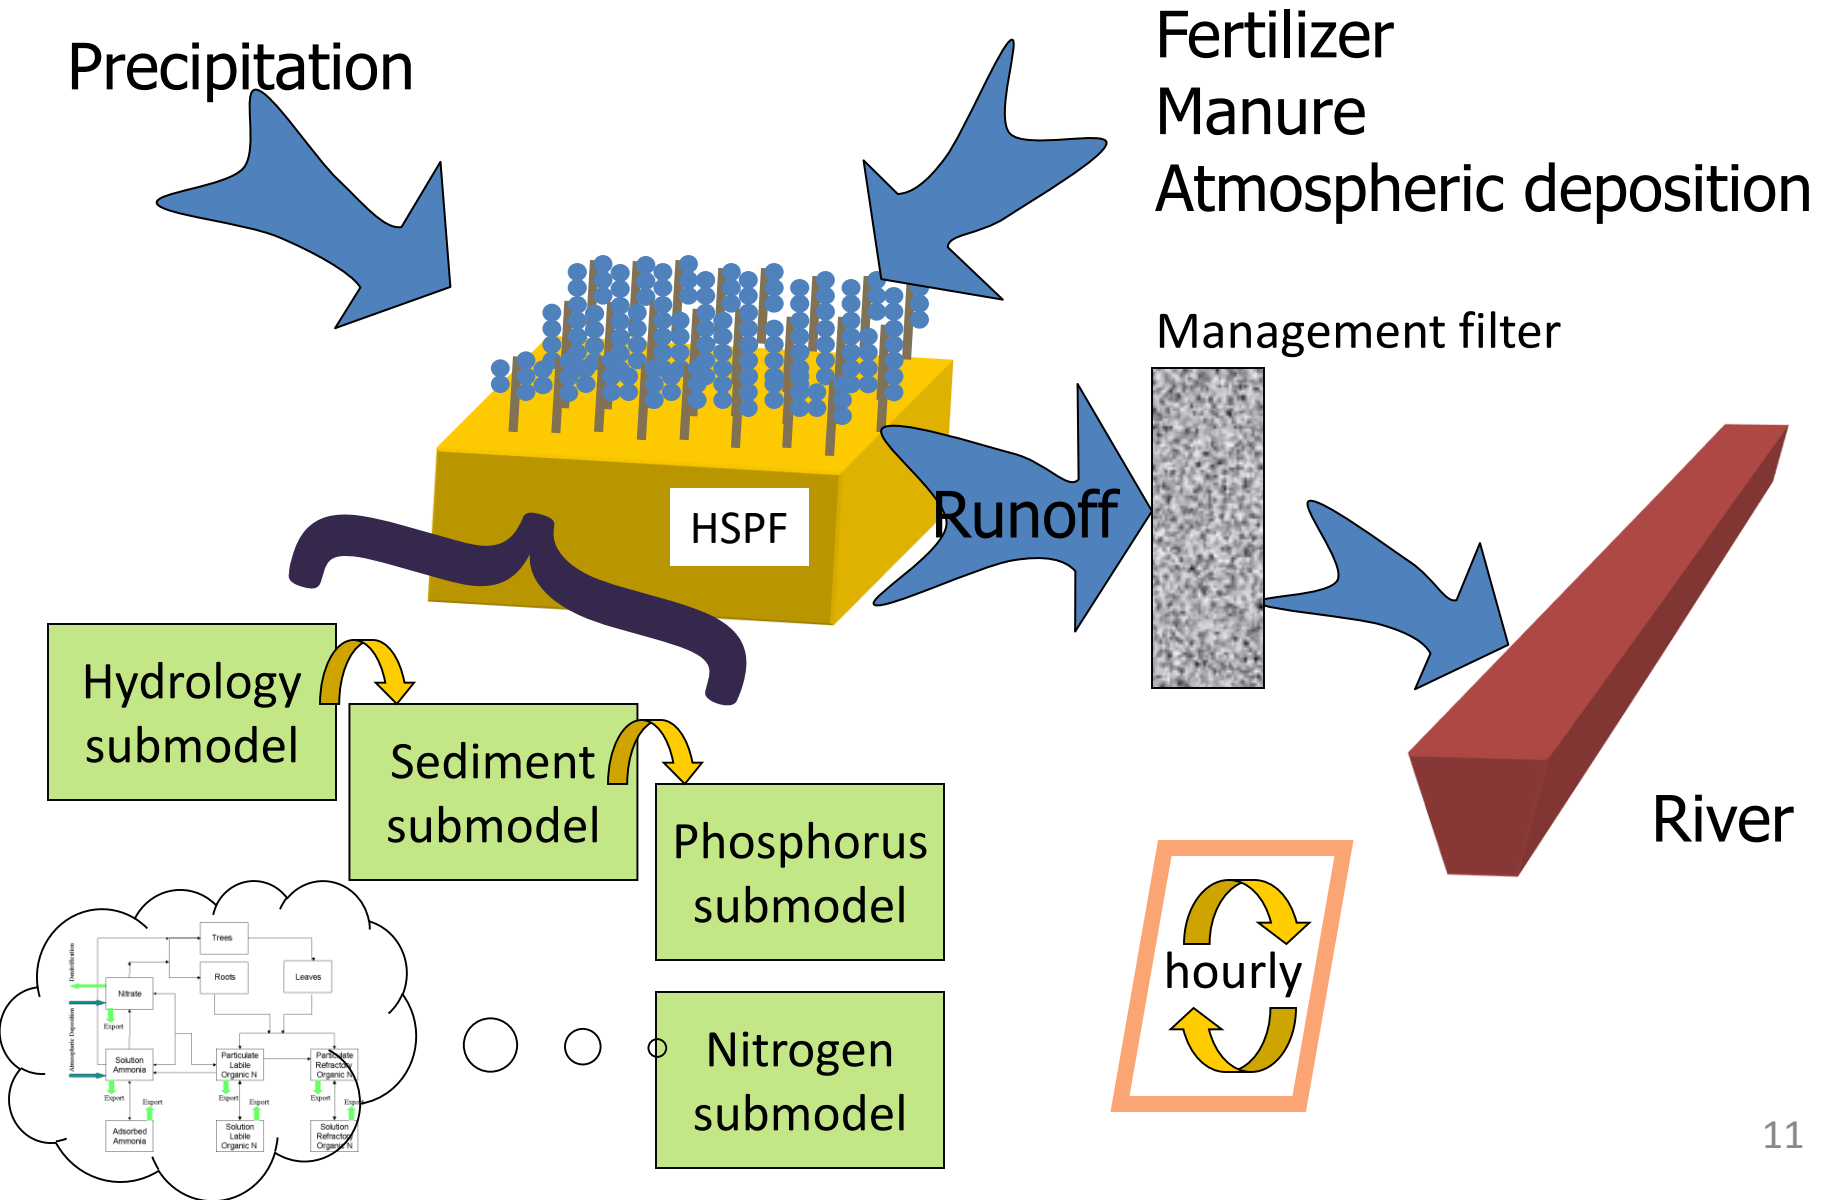

Motivation

- Partnership needs to be able to engage local partners in order to get practices on the ground
- Current suite of modeling tools is used as a wedge
- Evolution of models will allow us to work with key partners
- Healthy step in adaptive management process

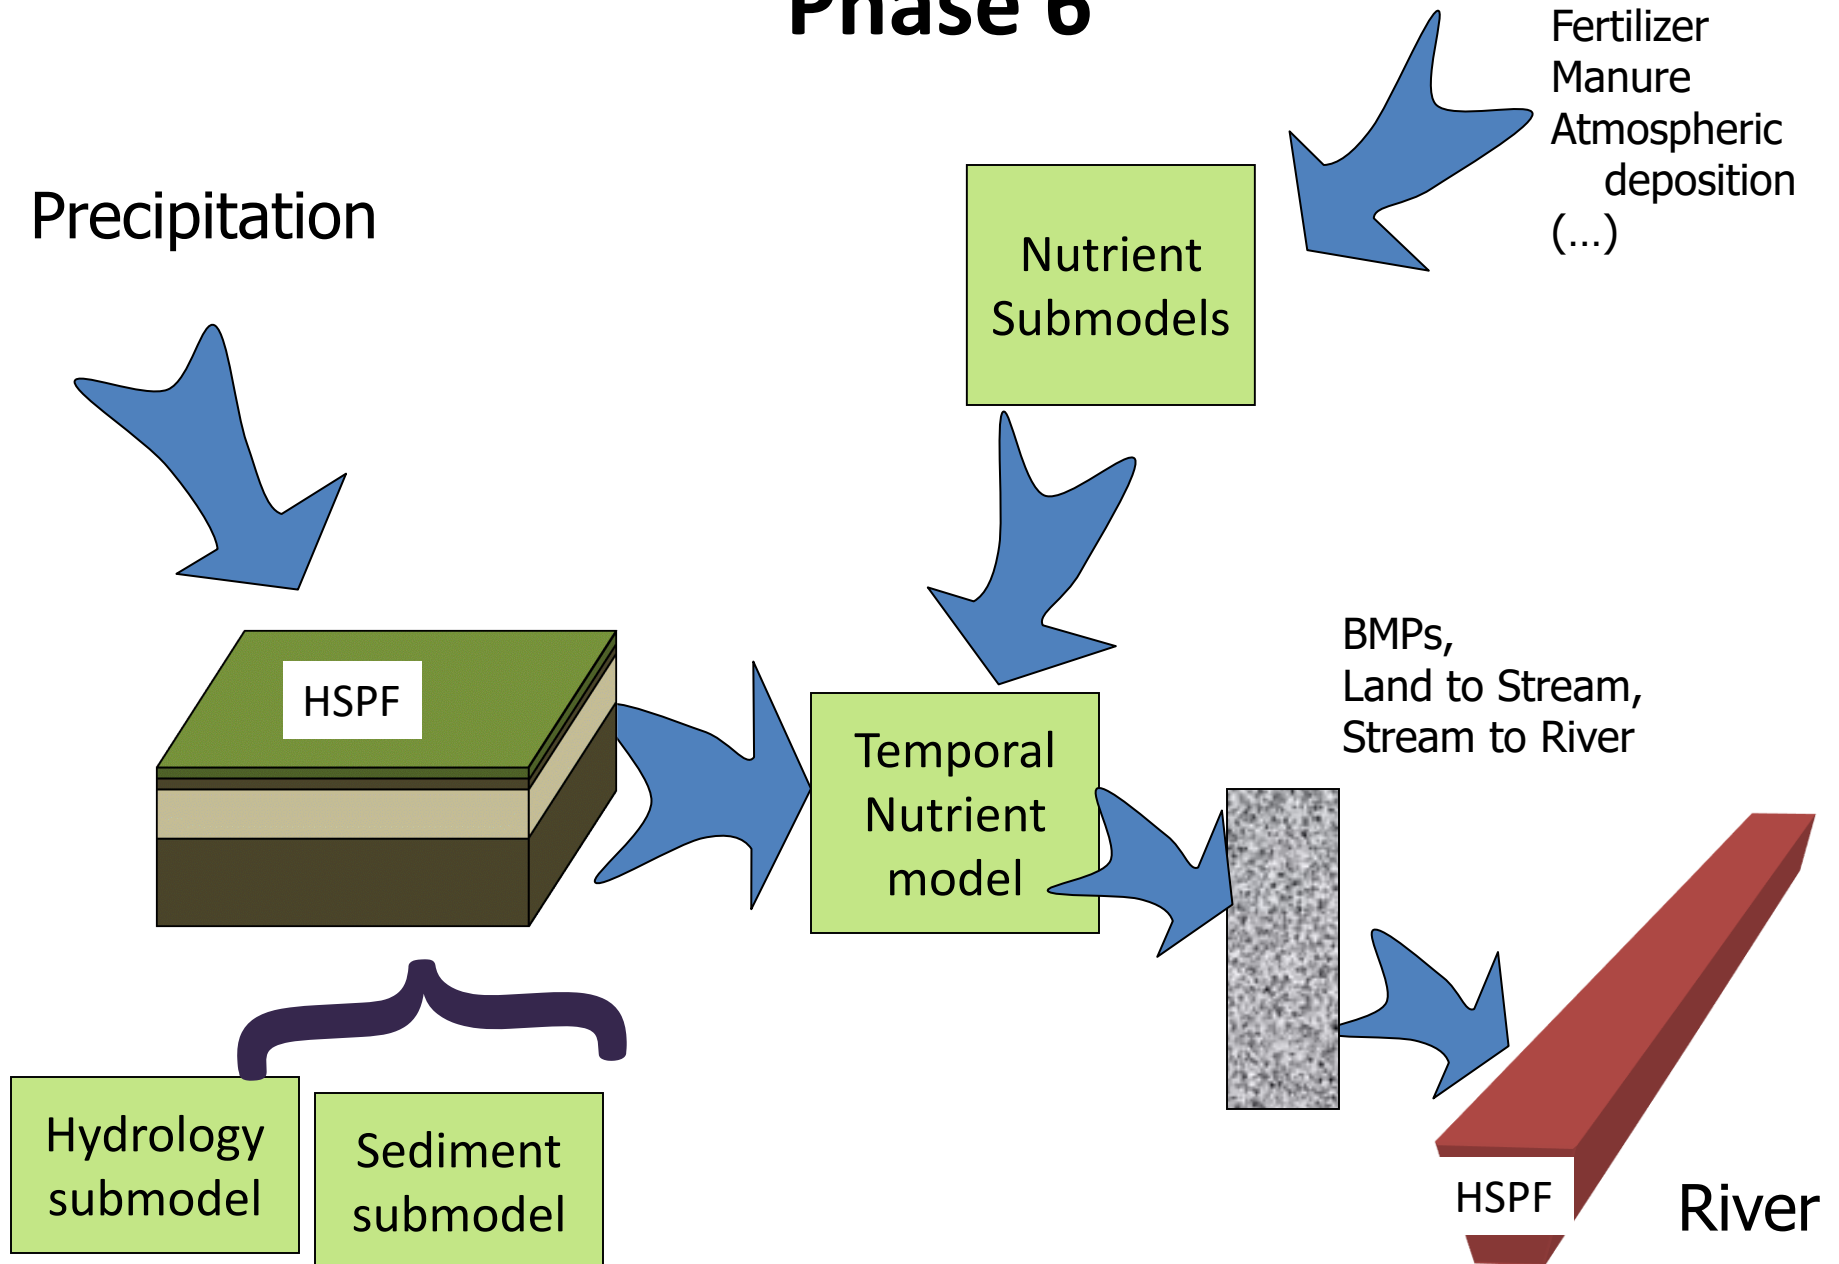

PSC input

- Revisit model calibration methods and assumptions so modeling results better align with **monitoring data**
- Incorporate better model **input data** from local partners, particularly for current, historic and future land uses and their associated pollution loading rates
- Make CBP models more **transparent**, easier to understand, and better decision-support tools

How the Phase 5 Model Works

Phase 6

Phase 6 New Elements

Simple relationships between input and output informed by multiple models

Nutrient Submodels

Temporal Nutrient model

Estimate of lag time
Does not change the overall load

BMPs,
Land to Stream,
Stream to River

Spatial variability parameters
Informed by models, analyses, and calibration

Load for a land use in a segment =

Estimated
Average + Sensitivity * Δ Inputs

Chesapeake Bay Nontidal Monitoring Network

NTN stations

- ▲ River Input Monitoring Site
- Primary Monitoring Site
- Secondary Site
- Susquehanna
- Eastern Shore
- Western Shore
- Patuxent
- Potomac
- Rappahannock
- York
- James

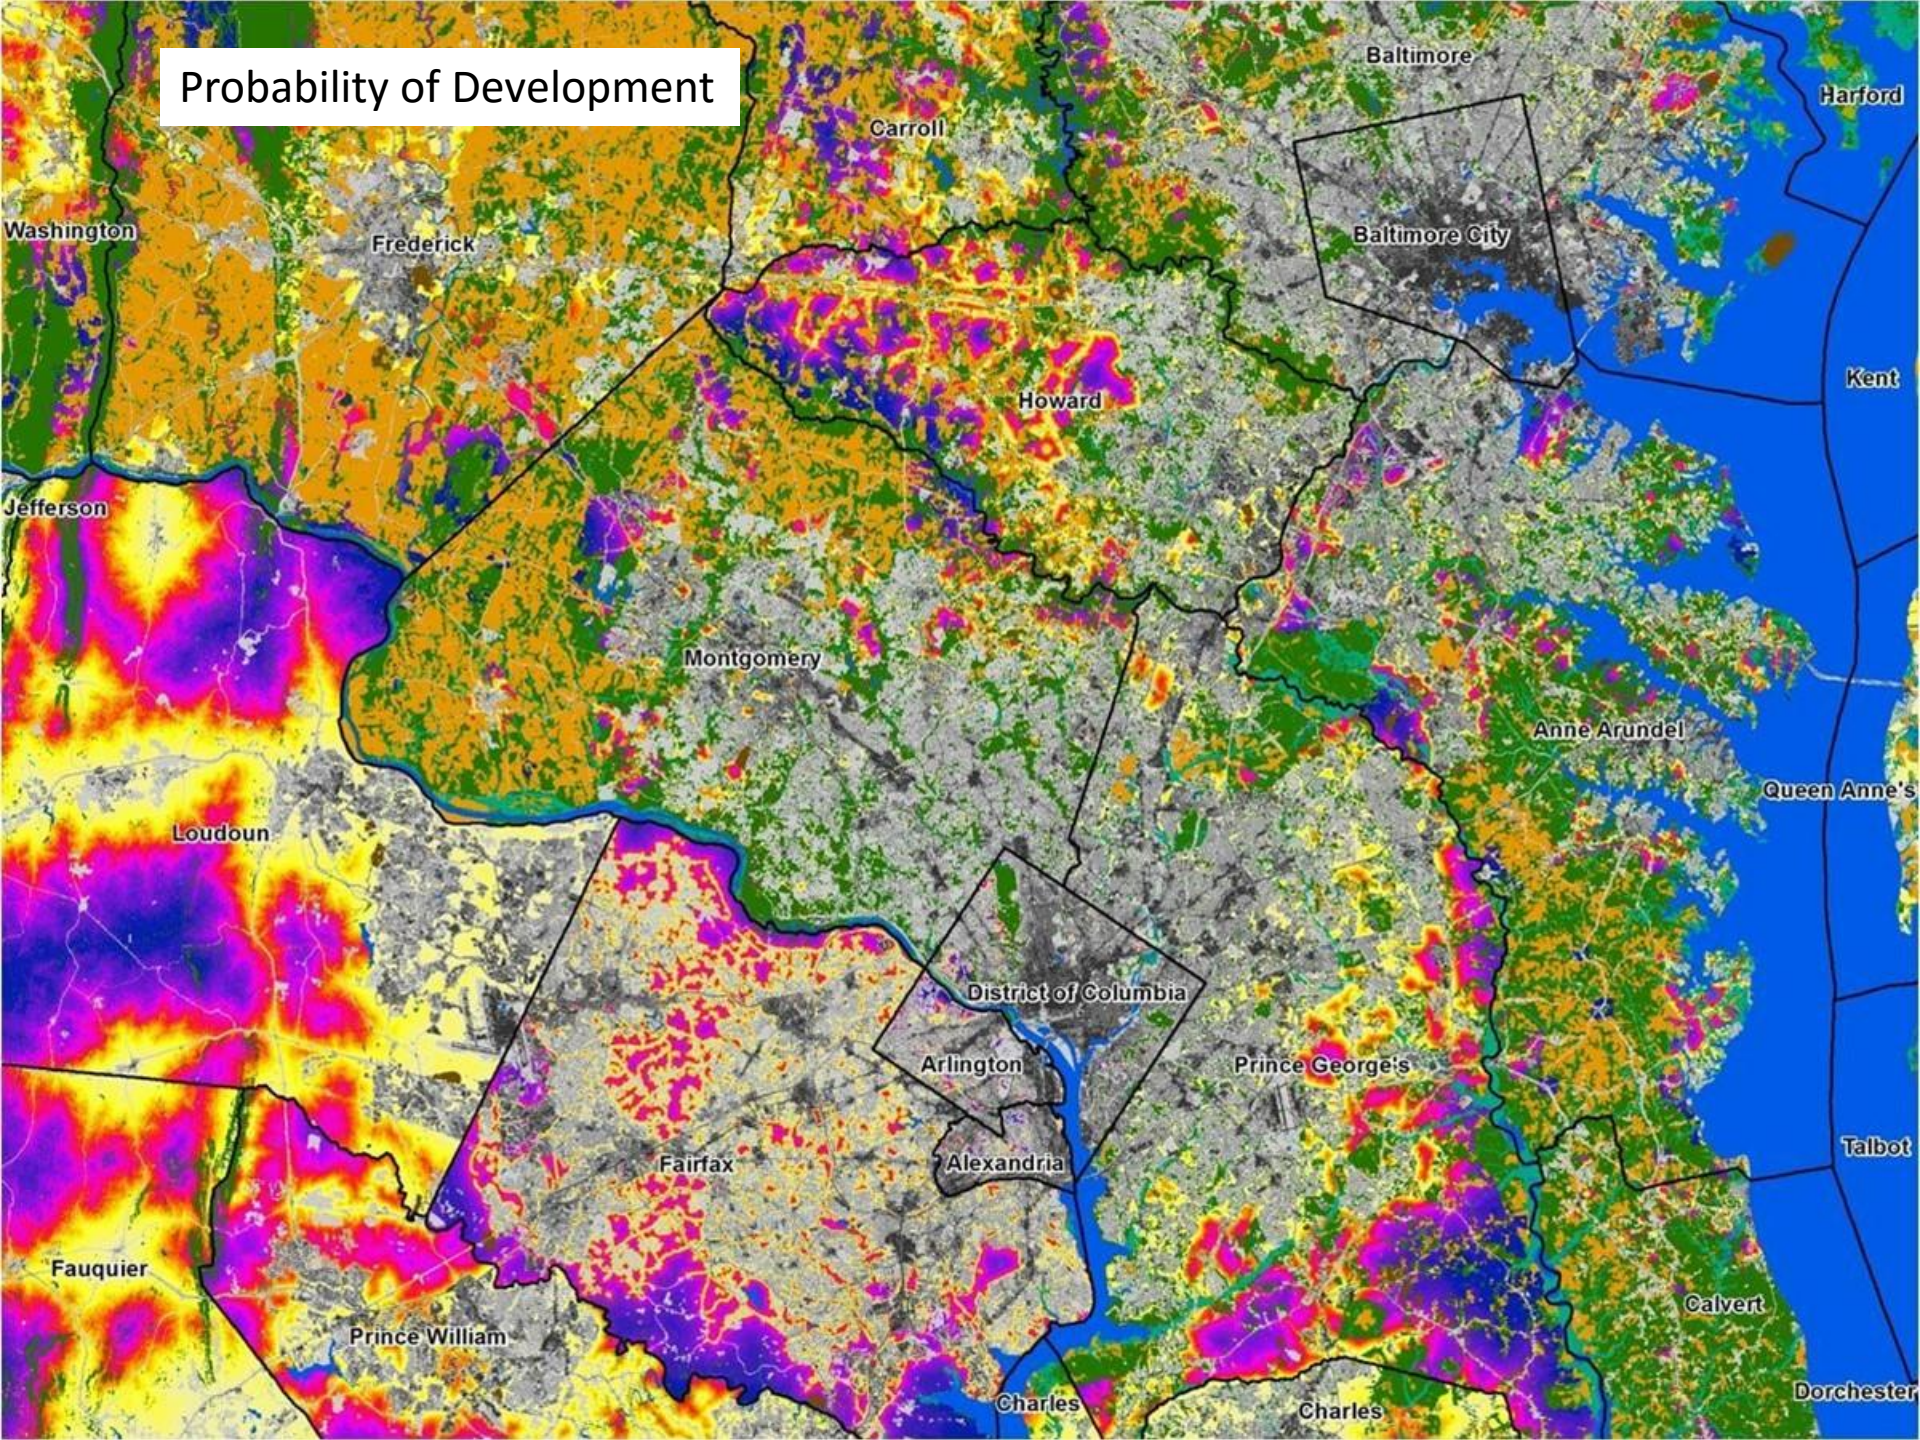

- 1990s – begin widespread monitoring
- 2000s – create nontidal network
- Early 2010s – develop method to determine trends
- Mid-2010s – explain trends
 - BMPs
 - land use change
 - atmospheric deposition
 - lag times
 - natural factors

Better Input Data

- **Many** data sets
- Focus on a few
 - Land Use
 - BMP Effectiveness
 - BMP Implementation

Probability of Development

P6 Land Use Database Versions

Version 1 (July 2015)

- Based exclusively on national/regional data

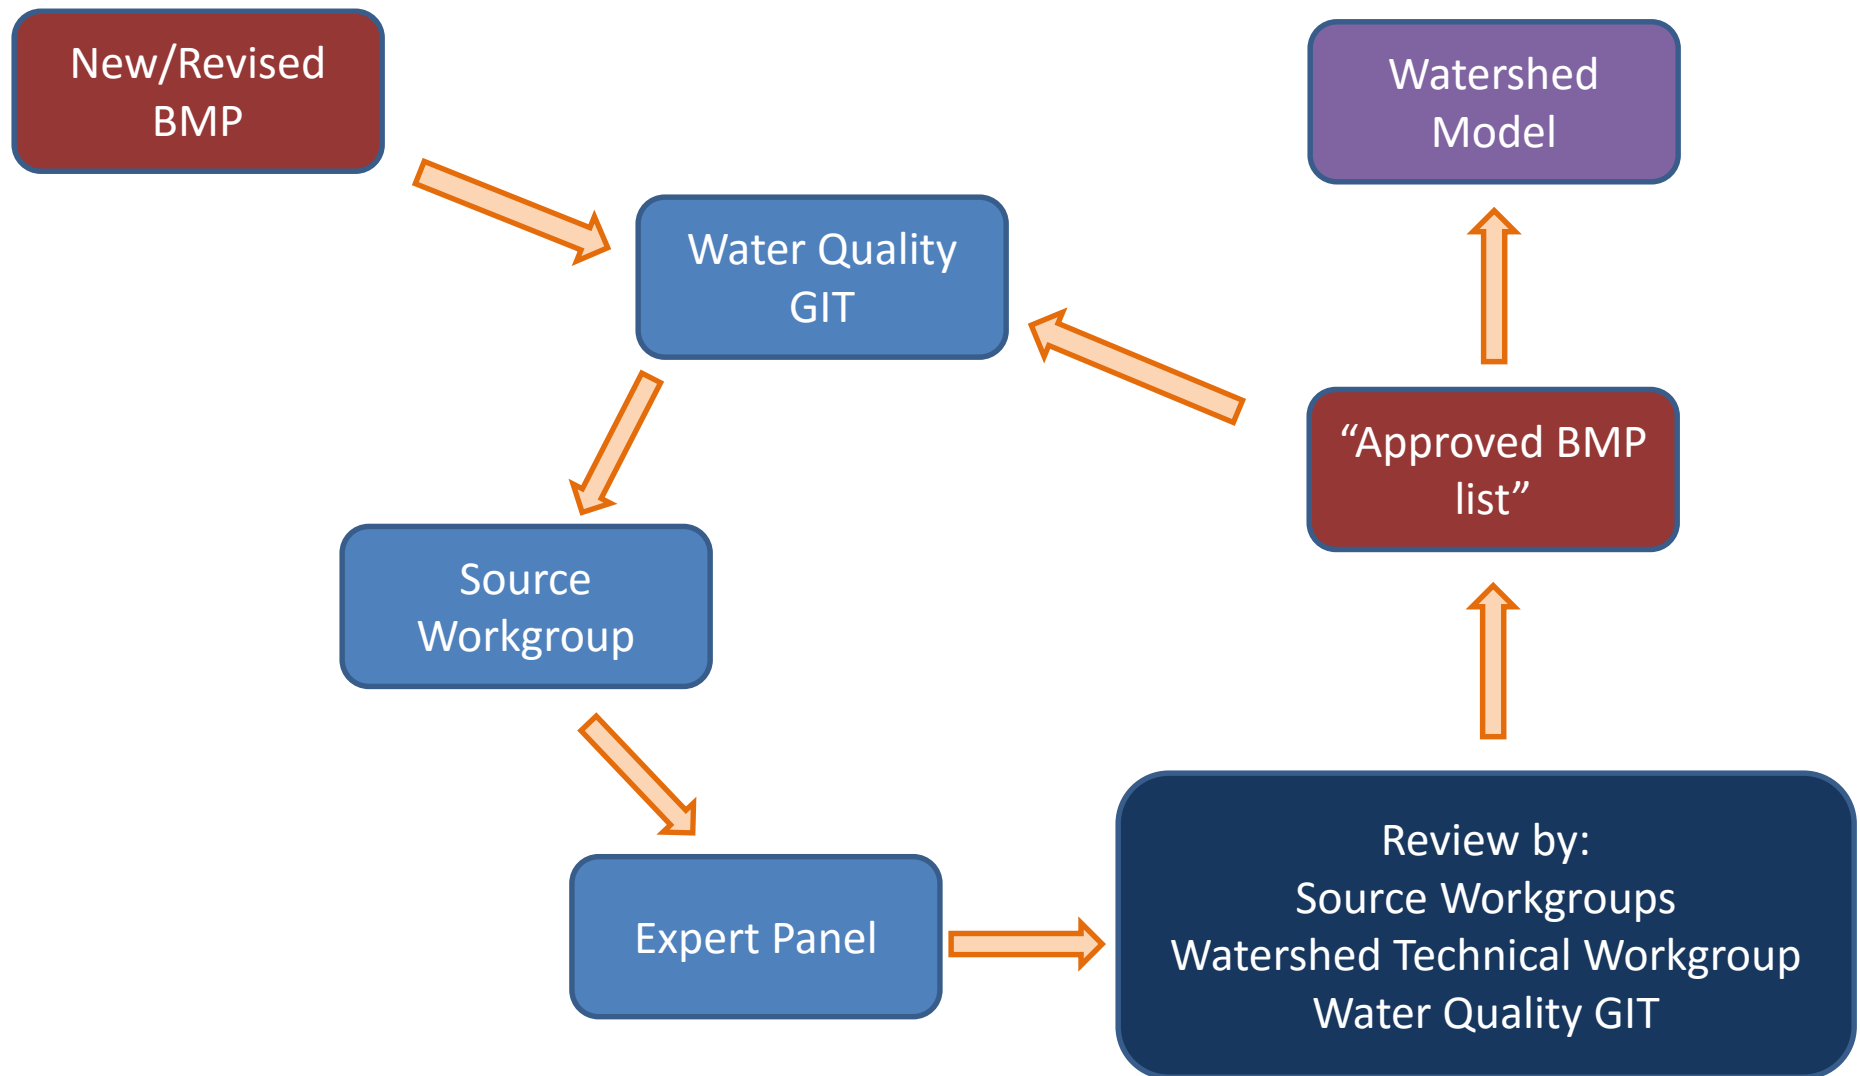

Version 2 (October 2015)

- Incorporates local land use/cover data
 - Includes multiple wetland classes
 - Initial estimates of new sediment delivery factors in the Piedmont and Valley & Ridge provinces
- Marginally reviewed by local governments and federal agencies

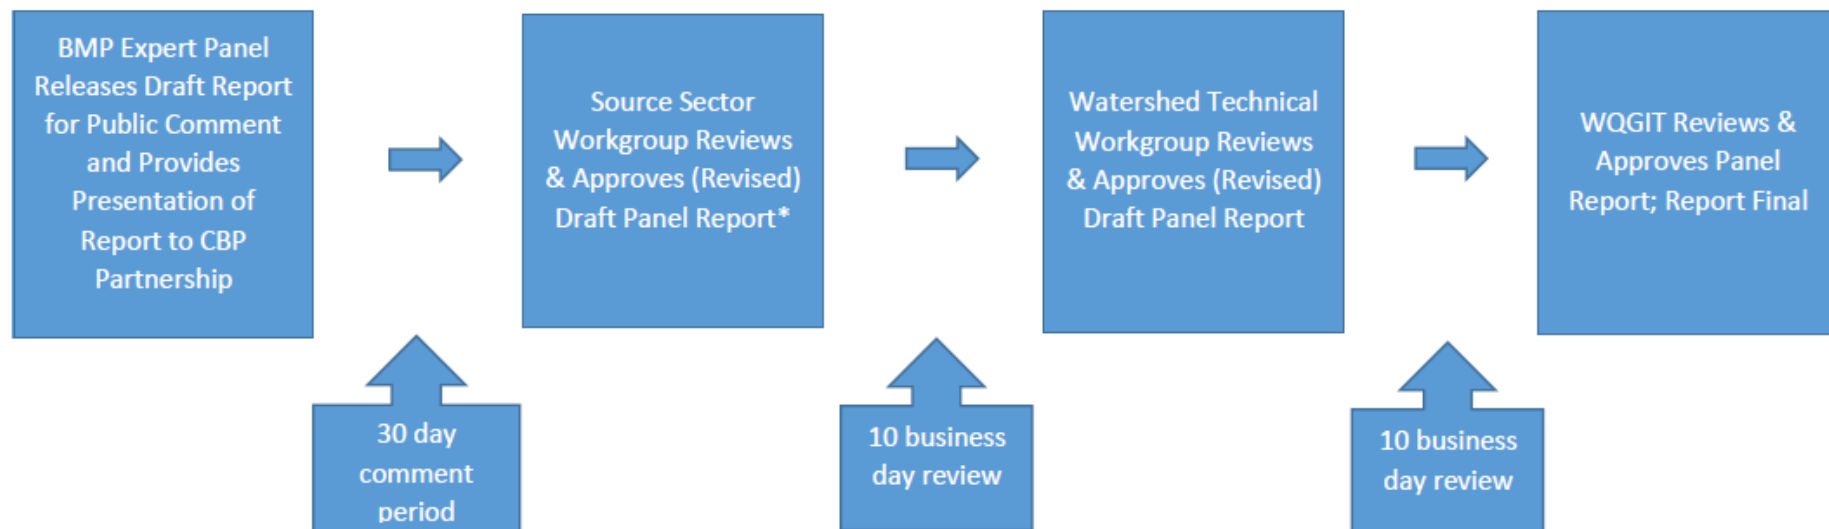

Version 3 (August 2016)

- Incorporates local land use/cover data
- Incorporates high-resolution land cover, everywhere
 - Includes Tree Canopy over Roads and Tree Canopy over Impervious (other)
 - Includes new sediment delivery factors
 - Includes wetland efficiencies
- Extensively reviewed

Protocol for Adding/Modifying BMPs

Appendix I: CBP Partnership Review Process for BMP Expert Panels

CBP Partnership has Opportunity to Review and Comments on Draft Panel Report during Each Stage of Review Process

To better ensure effective resolution of comments, all interested partners, groups or individuals are encouraged to submit their comments during the first review and comment period. New comments at later stages will be considered, but the Panel can more effectively address substantive comments the earlier they receive them.

*The Panel Chair and Coordinator are responsible for developing a “Response to Comments” document based on feedback received through partnership review. The “Response to Comments” document will be attached to the final Panel report.

Status of Current and Upcoming BMP Expert Panels of the Chesapeake Bay Program Partnership

The Chesapeake Bay jurisdictions implement Best Management Practices (BMPs) to achieve the goals set forth in the [2010 Chesapeake Bay TMDL](#). Through the [Protocol for Development, Review and Approval of Loading and Effectiveness Estimates for Nutrient and Sediment Controls](#), newer practices and technologies are considered and evaluated for inclusion in the Chesapeake Bay Program partnership modeling tools by expert panels. Existing practices are re-evaluated to ensure they reflect the best available scientific data and information. Below is a table identifying those BMPs that are currently undergoing the expert panel process. A list of completed expert panels can be found on Chesapeake Stat:

http://stat.chesapeakebay.net/?q=node/130&quicktabs_10=3

BMP Expert Panel	Key Contact(s)	Description	Current Status	Next Steps
Current Panels				
Nutrient Application Management Start Date: 2011 Anticipated End Date: May 2015	Agriculture Workgroup: Chris Brosch and Mark Dubin	The Expert Panel was charged with defining the effectiveness of nutrient management on reducing nutrient and sediment pollution. The panel has organized the practice into three tiers, each building on the previous tier in succession.	The Nutrient Management Panel held a webinar on August 20 th to brief the Partnership on the feedback received during the open comment period and to provide an overview of the Panel's responses. The final report is undergoing the Partnership approval process.	The report received partial approval from the AgWG on August 17 th . The WTWG will be asked to approve the technical appendix on September 3 rd , and the WQGIT will be asked to approve the report on September 14 th .
Manure Technologies Start Date: December 2014 Anticipated End Date: December 2015	Agriculture Workgroup and Virginia Tech: Jeremy Hanson	Expert Panel will determine pollution control performance measure estimates for the following six (6) prioritized manure technology BMPs: Microbial Digestion (aerobic/anaerobic); Chemical Treatments – Dry Manure; Thermal (or Thermochemical) Treatment; Solid-Liquid Separation; Composting; and Chemical Treatments – Wet Manure	The expert panel is compiling draft sections of their report.	The panel plans to release its full set of recommendations for partnership review in Fall 2015.

Continues for 5 Pages

Historical BMPs

- Submission of all historical BMP data (1985 through June 30, 2014) to NEIEN by September 30, 2015
- Needed to
 - Calibrate the Phase 6 Watershed Model
 - Target future implementation
 - Understand trends in monitoring data
- Resource-intensive process

Goal – Stakeholder understanding

- Understandable model
- Inclusive process
- Better and more local input data
- More monitoring data
